ILA-Oxblood red, good stems-----	.50	TAKAS YELLOW-Deep rich yellow----	.40
JOANNE PETTIT-Salmon shades-----	.50	YELLOW GEM-A reliable yellow-----	.40

PLANTING INSTRUCTIONS

Roots should be planted in trenches or holes, four inches deep in heavy soil and six inches deep in sandy soil laid flat down (not on end) and covered with earth not over two inches in depth filling in as the plant develops. Where drainage is poor, do not plant so deep and keep a furrow open between rows to facilitate drainage in wet weather. You cannot expect a dahlia to grow in a wet soggy ground or expect replacements when planted in ground in this condition. Wait a few days for the ground to dry out somewhat.

This image shows a blank, aged, cream-colored page, likely an endpaper or flyleaf from an old book. The paper has a textured appearance with numerous small, dark brown spots scattered across its surface, characteristic of foxing or dirt. There are also some faint, illegible markings and smudges near the bottom edge, possibly from a previous page or a stamp. The overall tone is a light beige or off-white.
